

Academic Year: 2011-2012

Semester II/IV

Subject: International Business Finance

Marks: 70

Time: 3.00 p.m to 6.00 p.m

Date: 6.1.2012

Course old

Instructions: Candidates should read carefully the instructions printed on the question paper and on the cover of the Answer Book, which is provided for their use.

Q1) Write short note on any 2 out of 4 (10 Marks)

- Minimisation of cost of capital approach to designing global capital structure.
- Letter of credit
- Spot rate and forward exchange rate giving suitable example.
- Forward Contracts.

Q2) Attempt any 2 out of 5 (10 Marks)

- Distinguish between centralized and decentralized cash management.
- Briefly discuss the risks involved in project export business.
- Distinguish between FDI and FII.
- Distinguish between currency swaps & interest rate swaps.
- How are leads and lags helpful in international cash management?

Q3) Attempt any 3 out of 5 (30 Marks)

- Discuss the various ways of assessing & managing political risks by MNC's.
- Explain the Interest rate parity theorem with real life examples.
- How do derivatives help in managing currency risks?
- What is Economic Exposure? How can it be managed?
- What is a yield curve? How is it constructed? How does interest rate risk influence the yield curve?

Q4) (20 Marks)

The Board of Directors of CM Ltd. is considering Investment in a project having a life of 5 years. The project is based in an upcoming BRIC country. Forecast financial data is as follows:

Year	(Rs. Million)					
	0	1	2	3	4	5
Fixed Assets	(450)					
Working Capital	(50)					
Revenue		420	510	575	550	510
Costs		310	385	420	400	350
Finance charges		15	15	15	15	15
Depreciation		80	80	80	80	80
Profit before tax		15	30	60	55	65

The applicable tax rate is 33%. The company's cost of capital is 12% and the target accounting rate of return is 25%. The initial investment has no salvage value. The working capital is expected to be liquidated at the end of the life at its book value.

Compute the NPV and the ARR and advice the management if the investment should to be undertaken. Your decision should also include non financial factors, if any.

Future Value Interest Factor for an Annuity

1/4

$$FVIFA(k, n) = \frac{(1+k)^n - 1}{k}$$
